

Users' Manual of Morse conversion program

The morse conversion program is for code and decode text into the morse code or morse code into the text. Also generating files to store conversions.

Select 0 → Output is a statistic of Latin characters with morse codes

Select 1 → Input is a text, and output is a morse code

Select 2 → Input is a morse code, and output is a text

Select 3 → Input is a text, first output is a text in file.txt, and second output is a morse code in newfile.txt

Select 4 → Input is a morse code, first output is a morse code in file.txt, and second output is a text in newfile.txt

Select 5 → It displays the history in the screen and inserts previous conversions to the history.txt file

Warning!

Please always use non-capital letter /Ex: a not A/.

Otherwise it cannot convert text into the morse.

Please take space between the morse code when you insert the morse code
